Sleep and Memory
A. Smith
DOI 10.5555/spur.2024.001
Journal of Sleep Research, page 345.
Participants completed the task over two consecutive nights.
Results were analysed with mixed-effects models.

Journal of Sleep Research, page 346.
Participants completed the task over two consecutive nights.
Results were analysed with mixed-effects models.

Sleep supports the consolidation of declarative memory.
Memory traces are strengthened during slow-wave sleep
and later integrated into cortical networks.
Journal of Sleep Research, page 347.
Participants completed the task over two consecutive nights.
Results were analysed with mixed-effects models.

Journal of Sleep Research, page 348.
Participants completed the task over two consecutive nights.
Results were analysed with mixed-effects models.

During rest the hippo-
campus replays recent experience.
Journal of Sleep Research, page 349.
Participants completed the task over two consecutive nights.
Results were analysed with mixed-effects models.

Journal of Sleep Research, page 350.
Participants completed the task over two consecutive nights.
Results were analysed with mixed-effects models.

Journal of Sleep Research, page 351.
Participants completed the task over two consecutive nights.
Results were analysed with mixed-effects models.

Journal of Sleep Research, page 352.
Participants completed the task over two consecutive nights.
Results were analysed with mixed-effects models.
